Walco/OMMA FSC

Two Roller Entry Level Glue Spreader for Water Based Adhesives

FSC model is the entry-level of Walco/OMMA's water-based glue spreaders range, the starting point for small or discontinuous productions.

It has a solid and sturdy structure with 2 spreading rolls fed by grinded steel dosing tanks with micrometric glue adjustment. The spreading rolls are rubber covered with a grooved surface.

The FSC is the glue spreader for simple assembly bonding work; it's normally used in small production and where the highest application precision is not required.

It can be equipped with [MIXER](#) (automatic device to feed multi-component glues) or with automatic mono component glue feeder [MGF](#). It can be also cooled with a glue feeding conditioning device [CRIO](#), with a specific positioning of the rollers.

The FSC model is produced in standard rollers width 50" and 63 "(1.300 and 1.600mm) with the ability to customize the width for special applications.
