## **Walco/OMMA GS**

### **Four Roller/Two Motor Glue Spreader for Water Based Adhesives**

A Glue spreader with four rollers, Walco built - OMMA's GS model is designed to achieve superior quality for water base gluing operations.

With the OMMA GS, the proper amount of glue applied is ensured by dosing / metering rollers that work close to the spreading rollers with different speeds, allowing a constant uniformity of spreading. Rollers are rubber coated. The spreading rollers come with standard grooving and can be modified according to your requirements.

The OMMA GS has double motorization; one for each group of dosing / metering and spreading rollers. The amount of glue is adjusted approaching and distancing the dosing roller position to its correspondent spreading roller.

The GS models are four rollers glue spreaders with universal, general purpose having very good quality and price ratio. They are solid, robust machines with high reliability and a heavy duty construction

The GS models can be upgraded and equipped with Automatic [MIXER](#) (automatic device to feed multi-component glues) or with automatic mono component glue feeder [MGF](#). They can be also automatically cooled with a glue feeding conditioning device [CRIO](#), with a specific positioning of the rollers.

The GS is produced in standard widths of 50" and 67" (1.400 and 1.700 mm).
