

Walco/OMMA HGS-RC

Hot-Melt Reverse Roller Coater

OMMA's HGS-RC hot-melt, reverse roll coater is designed to achieve the smoothest (best) surface quality; Walco built OMMA HGS-RC is employed when applications of very thin Hi-Gloss or Super-Mat decorative materials on top sides of flat panels are required.

More and more furniture components manufacturers use very thin decorative materials that are sensitive to glue applications.

As a result, panels and glue surfaces need to be smooth like a mirror to maintain the quality of the foil-décor.

HGS-RC is the best hot-melt coater for this application. HGS-RC has the following main features:

- Independent motors
- Independent roller heating
- Motorized thickness adjustment
- Driven transport rollers with anti-adhesive coating
- Additional glue finishing section
- Electronic speed adjustment on each roller and on transport rollers

The HGS-RC has a standard width of 50" (1.400mm); customization upon request.

For more information about the HGS-RC contact sales@walcomachine.com.
