ULTIMATE COATING AND LAMINATION TECHNOLOGY

WALCO VX ON LINE

INDUSTRIAL VERTICAL LAMINATORS

WALCO® VX on line are **unique vertical laminators custom-designed** for the application of a temporary protective film on **Insulated Glass Units and flat glass.**

2 VX are installed in tandem with **3 conveyors** between each laminator.

The VX on line **can be installed in a line** after the press and before the sealing.

This machine uses the latest **WALCO® patented technologies** such as, **both face application on the vertical process** and the **WALCO® cutting system.**

Working widths

Height : 300 mm to 3,200 mm (12" to 126")

Length: 500 mm to the maximum conveyor length

Other sizes available on customer request

Cutting system

WALCO® Patented Automatic cutting system : Adjustable free space without film all around the glass

Cut to edge

Negative or Positive cut

Thickness

4 mm to 80 mm (0.16" to 3.2")

ADDED VALUE

- Automatic application of film width with respect of glass size
- Protection of both sides of the glass in a single pass
- Only 25 sec to cover both sides of 1 square meter IGU (cycle time)
- Follows the speed of the line (until 60m/mn)
- Safe and ergonomic machine
- Compatible with any brand of glass assembly line
- Non stop during the glass production and the change of film rolls
